

Slide 1: Introduction – What Is a Search Pipeline? Search engines like Google and Microsoft Bing help users find information online. Behind every search, there is a process with multiple steps. This process is called the Search Pipeline.

Slide 2: Search Pipeline Overview The Search Pipeline has 5 main steps: 1. Crawl 2. Index 3. Rank 4. Understand 5. Show

Slide 3: User Search Example Example: User types: Best laptops 2026 Now the search engine starts processing this request.

Slide 4: Phase 1 – Crawling (Explorer) Crawling is the process of finding and scanning websites on the internet.

Slide 5: Who Performs Crawling? Search engines use special programs called Web Crawlers or Spiders. Examples: Googlebot, Bingbot.

Slide 6: What Do Crawlers Do? Visit websites Read page content Follow links Discover new or updated pages They scan the internet to collect data.

Slide 7: Crawling Example Googlebot visits a tech website, finds a laptop review page, then follows a link to an online store.

Slide 8: Important Point If a page is not crawled, it will not appear in search results. Search engines must know the page exists.

Slide 9: Key Summary Crawling is the first step of the search pipeline. It helps discover websites. Without crawling, results cannot be shown.
